

GREENCELLS COMPLETES 40 MWP CRAYS HALL FARM IN THE UNITED KINGDOM

Saarbrücken, 20 August 2026 - Greencells Group, one of Europe's leading EPC service providers for utility-scale solar power plants and battery energy storage systems (BESS), has completed and successfully handed over the 40 MWp Crays Hall Farm solar park in Essex, United Kingdom, to Aukera Energy. The plant has reached Commercial Operation and is now generating approximately 40 GWh clean energy per year.

The project was delivered under a Turnkey EPC scope, on a technically demanding site with significant environmental and logistical constraints. Greencells will continue to be responsible for the operation and maintenance of the plant.

Crays Hall Farm marks the latest successful collaboration between Greencells and Aukera Energy, strengthening a partnership that has delivered multiple projects in the UK.

The United Kingdom remains one of Greencells' core European markets. With over 767 MWp across 55 projects, the company has established itself as one of the most experienced EPC partners for utility-scale solar and BESS in the country. Active in the UK since 2014, Greencells continues to see strong demand from developers and investors looking for reliable project delivery.

Fabian Herr, CEO of Greencells Group, commented, "The UK has been central to our growth in the past years. Our approach of combining technical excellence, scalable execution and strong partnerships is what makes projects like Crays Hall Farm possible. Our collaboration with Aukera Energy is a great example of that. We look forward to continuing this path together."

ABOUT GREENCELLS GROUP:

Greencells Group, headquartered in Saarbruecken, Germany, is an international EPC provider specialising in the construction and maintenance of utility-scale solar power plants and BESS.

Founded in 2009, the company is a pioneer in the renewable energy sector and is actively driving the expansion of clean energy infrastructure across Europe.

Greencells delivers turnkey solar power plants and BESS, as standalone large-scale storage or co-located with photovoltaics. Its service portfolio covers engineering, procurement and installation by its in-house assembly team, commissioning, operations and maintenance.

With over 4.1 GWp of installed capacity worldwide and more than 400 employees, the company is one of the largest EPC providers for utility-scale renewable energy installations in Europe.
